No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1987 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 31

Number 1, March 1987

Dirk Vorberg and Rolf Ulrich. Random Search with Unequal Search Rates: Serial and Parallel Generalizations of McGill's Model 1

Bernard Fichet and Elisabeth Gaud. On Euclidean Images of a Set Endowed with a Preordonnance 24

David E. Bell. Multilinear Representations for Ordinal Utility Functions 44

Manfred Droste. Ordinal Scales in the Theory of Measurement 60

Thomas L. Saaty and Luis G. Vargas. Stimulus-Response with Reciprocal Kernels: The Rise and Fall of Sensation 83

Theoretical Note

Daniel N. Osherson. New Axioms for the Contrast Model of Similarity 93

Announcements 104

Number 2, June 1987

Ernest W. Adams and Robert F. Fagot. Monotonicity, Convexity, and Other Qualitative Psychophysical Laws 113

Theodore M. Alper. A Classification of All Order-Preserving Homeomorphism Groups of the Reals that Satisfy Finite Uniqueness 135

M. G. M. Koppen. On Finding the Bidimension of a Relation 155

Margaret B. Cozzens and Rochelle Leibowitz. Multidimensional Scaling and Threshold Graphs 179

Hans Irtel. A Conjoint Grassmann Structure for Testing the Additivity of Binocular Color Mixtures 192

Book Reviews

Terrence J. Sejnowski. Computing with Connections. A review of *The Connection Machine* by W. Daniel Hillis 203

Edwin Williams. Learning Syntax with Stacks and Buffers. A review of *The Acquisition of Syntactic Knowledge* by Robert C. Berwick 211

Number 3, September 1987

Geoffrey J. Iverson. Thurstonian Psychophysics: Case III 219

Stephen J. Guastello and David W. McGee. Mathematical Modeling of Fatigue in Physically Demanding Jobs 248

Toshimasa Yamazaki. Non-Riemannian Approach to Geometry of Visual Space: An Application of Affinely Connected Geometry to Visual Alleys and Horopter 270

Book Review

Earl Hunt. A review of *Machine Learning: An Artificial Intelligence Approach (Vol. 2)* edited by R. S. Michalski, J. G. Carbonell, and T. M. Mitchell 299

Number 4, December 1987

Michael Leyton. A Limitation Theorem for the Differentiable Prototypification of Shape 307

Mou-ta Chen and Kathleen C. Chen. A Group Model of Form Recognition under Plane Similarity Transformations 321

Ernest Greene and Peter Waksman. Grid Analysis: Continuing the Search for a Metric of Shape 338

Norma Graham, Patricia Kramer, and Dean Yager. Signal-Detection Models for Multidimensional Stimuli: Probability Distributions and Combination Rules 366

John M. Miyamoto. Constraints on the Representation of Gambles in Prospect Theory 410

F. Gregory Ashby. Counting and Timing Models in Psychophysics and the Conjoint Weber's Law 419

Book Reviews

Keith Niall. Perspectives Yet Unseen. A review of *Perception with an Eye for Motion* by James E. Cutting 429

James E. Cutting. On Cross Ratios and Motion Perception: A Reply to Niall 439

Walter Whitely. From a Line Drawing to a Polyhedron. A review of *The Machine Interpretation of Line Drawings* by Kokichi Sugihara 441

Author Index for Volume 31 449

INFORMATION FOR AUTHORS

The *Journal of Mathematical Psychology* publishes Research Articles, Monographs and Reviews, Notes and Comments, and Book Reviews in all areas of mathematical and theoretical psychology. Empirical research is welcomed when it is directly relevant to theoretical questions within psychology. The submission of papers concerned with the development or experimental testing of psychological *process models* is especially encouraged. Work in the area of fundamental measurement continues to be of interest to the Journal. Some example target areas for this journal are (1) perception and/or psychophysics, (2) work in fundamental measurement or scaling, (3) psychometric research if tied to explication of psychological concepts or process models, (4) artificial intelligence and computer simulation (e.g., computational vision as applied to human vision) of psychological processes, (5) learning and memory, (6) motivational dynamics, (7) neuropsychological theories, (8) psycholinguistics, (9) problem solving, and (10) human factors and human–computer interaction.

Manuscripts should be submitted (in quadruplicate) to *Journal of Mathematical Psychology*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. All correspondence will be handled by First Class Mail or by telephone to ensure prompt and efficient processing of manuscripts.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Mathematical Psychology* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Research articles, monographs, and reviews will be reviewed by at least two referees. Ordinarily, a Note or Comment will be reviewed by at least one referee although the Editor may accept or reject these unilaterally. Book reviews will be solicited by Dr. A. A. J. Marley. Each manuscript will be reviewed by an appropriate member of the Board of Editors who will select referees to assist him. Referees have the option of remaining anonymous to authors. Board members will correspond directly with the authors of accepted manuscripts which require revision. Rejected manuscripts, however, will be handled by the Editor, Dr. James T. Townsend. An article will not be considered in press until the author receives a letter so stating from the Editor.

Form of Manuscript. Manuscripts should be prepared on high quality bond paper with wide margins using double spacing throughout. At least four copies should be submitted, each copy to include all figures and tables. Each page of the manuscript should be numbered. The first page should contain the article title, author's name and affiliation. At the bottom of this page list the name and complete mailing address of the person to whom proofs are to be sent. The second page should contain an abstract.

Authors are requested to follow the instructions given by the *Publication Manual of the American Psychological Association*, 3rd edition, 1983. Certain modifications are listed below.

Equations. Equations should be numbered consecutively with the number placed in parentheses to the right of the equation. Limit numbering only to those equations that are in the main stream of the mathematical development. Refer to equations as Eq. (3) or simply (3), except at the beginning of a sentence when the word Equation should be spelled out. Equations should be punctuated to conform to their place in the syntax of the sentence.

Abbreviations and Symbols. Please do not use the abbreviations *S*, *E*, and *O* for subject, experimenter and observer. Also do not underline symbols in text or formula, for they will be routinely set in italics. A typewritten list of identified symbols *must* be submitted along with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential in order to avoid costly corrections in proof.

Do not use final periods with units of measure that are abbreviated (cm, s, kg, etc.) in text or in tables, except for "in." (inch).

Figures and Tables. All illustrations are to be considered as figures, and each graph or drawing should be numbered in sequence with Arabic numerals. Each figure should have a descriptive legend and these should be listed on a separate sheet. Figures should be planned to fit the proportion of the printed page (5 × 6 3/4 inches), and care should be taken that lettering on the original is large enough to be legible after a reduction of 50 to 60 percent.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double spaced) above the table. Footnotes to tables should be identified by superscript letters and placed at the bottom on the page containing the table. Footnotes in the text and title should be identified by superscript numbers and listed consecutively on a separate page.

References. Literature references in the text should be cited by author's surname and the year of publication, e.g. Roe (1980); Roe *et al.* (1981); Roe and Jones (1983, p. 150) (for references to a specific page). If a reference has more than two authors, the citation includes the surnames of all authors at the first mention, but later citations of the same reference include only the surname of the first author and the abbreviation "*et al.*" Suffixes a, b, etc., should be used following the date to distinguish two or more works by the same author(s) in the same year, e.g. (Roe, 1980a, 1980b). Literature citations in the bibliography should be arranged alphabetically according to the surname of the author. Journal titles should be written out in full rather than abbreviated. Please note style of capitalization and punctuation for journal articles, books, and edited books in the following examples :

TVERSKY, A., RINOTT, Y., & NEWMAN, C. M. (1983). Nearest neighbor analysis of point processes: Applications to multidimensional scaling. *Journal of Mathematical Psychology*, **27**, 235-250.

PURI, P. S. (1979). On certain problems involving nonidentifiability of distributions arising in stochastic modeling. In J. S. Rustagi (Ed.), *Optimizing methods in statistics* (pp. 403–418). New York: Academic Press.

NORMAN, M. F. (1977). *Markov processes and learning models.* New York: Academic Press.

Proofs and Reprints. Proofs will be sent to the author, with reprint order forms. Authors will be charged for alterations in excess of 10 % of the cost of composition. Fifty reprints of each article will be provided free of charge.

Special subscription rates are available for regular and student members of the Society for Mathematical Psychology. If you are not yet a member, you may request application forms from Dr. Robert L. Stout, Secretary Treasurer, Society for Mathematical Psychology, Butler Hospital, 345 Blackstone Blvd., Providence, Rhode Island 02906. If you are already a member, you may obtain information concerning special rates from the Publisher, Academic Press, Inc., Subscription Fulfillment Department, 1 East First Street, Duluth, Minnesota 55802.
